

Claims

1 1. A system for providing a pilot with a display of primary flight
2 instruments that can be viewed while the pilot's eyes are focused at infinity
3 through the aircraft windshield, comprising:

4 a computer;

5 means for connecting the computer to an electronic flight instrument
6 system data output port on the aircraft's instrument panel; and an eyeglass
7 mounted, clip-on, display operative to receive the output of the computer,

8 the computer being operative to process the information from the
9 electronic flight instrument system outlet port into a single display which
10 incorporates outputs from all of the principal flight instruments.

1 2. The system of claim 1 wherein the display is in the form of a
2 primary flight display.

1 3. The system of claim wherein the eyeglass mounted display
2 constitutes a liquid crystal display.
